1 Probing Depth

How to measure:
Detect first solution/resolution statement.
Count number of agent questions before that point.

Accuracy of measurement:
~85–90% (edge cases if solution is implied subtly)

Benefit for coaching:
Prevents premature resolution.
Improves diagnostic discipline.
Reduces repeat call behavior.

LLM required?
Yes (to detect first solution accurately)

2 Agent Word Share %

How to measure:
Count total words spoken by agent ÷ total words in call × 100.

Accuracy of measurement:
95–100% (purely mechanical)

Benefit for coaching:
Helps agent avoid dominance or passivity.
Improves conversational balance.

LLM required?
No (simple backend calculation)

3 Issue Reframing

How to measure:
Detect whether agent paraphrased customer issue.
Example phrases: “So what I understand is…”

Accuracy of measurement:
80–90%

Benefit for coaching:
Improves listening skill and customer trust.
Encourages structured communication.

LLM required?
Yes

4 Assumption Risk

How to measure:
Evaluate whether solution was given without verifying required details.

Accuracy of measurement:
75–85% (depends on scenario clarity)

Benefit for coaching:
Reduces guess-based resolution.
Improves investigation mindset.

LLM required?
Yes

5 Empathy Presence

How to measure:
Detect emotional acknowledgment phrases.
Example: “I understand how frustrating…”

Accuracy of measurement:
85–90%

Benefit for coaching:
Improves emotional intelligence and rapport.

LLM required?
Yes (semantic detection)

6 Empathy Timing

How to measure:
Check if empathy occurs before solution/policy explanation.

Accuracy of measurement:
80–85%

Benefit for coaching:
Teaches correct emotional sequencing.
Prevents mechanical service style.

LLM required?
Yes

7 Solution Clarity

How to measure:
Evaluate if instructions are step-by-step and specific.
Classify: clear / partially clear / vague.

Accuracy of measurement:
70–80% (subjective component)

Benefit for coaching:
Improves communication clarity.
Reduces customer confusion.

LLM required?
Yes

8 Summary Presence

How to measure:
Detect summary phrases near end of call.

Accuracy of measurement:
90–95%

Benefit for coaching:
Improves professionalism and structured closing.

LLM required?
No (keyword detection usually enough)

9 Closing Confirmation

How to measure:
Detect confirmation phrases:
“Does this resolve your issue?”
“Anything else I can help with?”

Accuracy of measurement:
95%

Benefit for coaching:
Improves perceived service quality.
Ensures emotional closure.

LLM required?
No (pattern detection)

10 Sentiment Shift

How to measure:
Analyze customer messages at beginning vs end.
Classify emotional tone change: improved / same / worsened.

Accuracy of measurement:
70–85% (depends on clarity of language)

Benefit for coaching:
Shows real conversational impact.
Encourages emotionally intelligent handling.

LLM required?
Yes (or sentiment model)

🎯 Summary Table

Metric	Measurement Difficulty	Accuracy	Coaching Impact	LLM Needed
Probing Depth	Medium	High	Very High	Yes
Word Share	Easy	Very High	Medium	No
Issue Reframing	Medium	High	High	Yes
Assumption Risk	Medium	Medium-High	Very High	Yes
Empathy Presence	Medium	High	High	Yes
Empathy Timing	Medium	Medium-High	High	Yes
Solution Clarity	Medium	Medium	High	Yes
Summary Presence	Easy	Very High	Medium	No
Closing Confirmation	Easy	Very High	High	No
Sentiment Shift	Medium	Medium	High	Yes
